To the discerning eye, there can be no substitute for the woodwork in the interior of this craft. For our Najads we have chosen a red-brown mahogany which we have polished and lacquered to a lustrious satin finish. We choose our timber with loving care, and let the natural shifting tones of colour and grain be the artistic proof of how a live-material should look at its best.

A significant feature of the forward cabin is the extra space aft

The Najad 371 has an owner's stateroom that is superior to most. The flush overhead planking provides luxurious space
